SUMMARY

A very committed and driven person with a love of learning and a keen interest in electronics and communication. competent in a wide range of technical fields. Showed capacity for productive peer collaboration and teamwork when working on assignments. knowledgeable about taking part in hackathons, technological groups, and extracurricular activities. possesses outstanding critical thinking, problem-solving, and communication abilities. adept at remaining current with the newest developments and trends in technology. I'm excited to put my knowledge to use, keep learning in a work environment, and explore new avenues in the industry.

EDUCATION

St.Joseph's college of engineering
B.E. ECE (2020 – 2024)
CGPA:8.4

SHRI ANDAND JAIN VIDYALAYA
HSC(2019-2020)
Percentage:67%

SHRI ANDAND JAIN VIDYALAYA
SSLC(2017 – 2018)
Percentage:60%

SKILLS

- Python
- SQL
- Core Java
- HTML
- Canva
- Problem Solving

CERTIFICATIONS

- Python - Besant Technology
- IEEE Student Chapter
- Core Java - Udemy

AREA OF INTERESTS

- Python
- Data Science
- Embedded systems
- Web designing

ACHIEVEMENTS

- Achieved victories in multiple chess tournaments at the district level.
- Organized and led the department symposium for a consecutive two-year period as the Symposium Leader.
- Serving as the chairperson of the IEEE student chapter for my department.

PROJECTS

Blood Cancer Detection

Tech stack: Machine learning ,EfficientNetB3 ,Flask application

- Developed and implemented machine learning algorithms for blood cancer detection, leveraging advanced techniques such as deep learning and ensemble methods.
- The development of an advanced blood cancer detection system involves a multimodal approach, targeting specific types such as Acute Lymphoblastic Leukemia (ALL), Chronic Lymphocytic Leukemia (CLL), Follicular Lymphoma, and Mantle Cell Lymphoma.
- The primary goal is to identify the most effective deep learning model for accurate predictions within a Flask-based web application

Event Web Page

Tech stack: HTML,CSS

- This website has been created specifically for our college symposium.
- Crafted a sophisticated black and gold theme to enhance the premium aesthetic.
- **Link:** jetsignum2023.vercel.app/

Air Quality Monitoring System

Tech Stack: MQ135 Sensor, ESP8266 with Arduino-IDE

- Designed and implemented an Air Quality Index (AQI) monitoring system using Arduino Uno to measure and analyze air pollution levels.
- Utilized Arduino Uno microcontroller as the core processing unit.
- Calibrated gas sensors to ensure accurate and reliable measurements.

Burglar Alarm

Tech Stack: PIR Motion Sensor, Arduino-Uno with Arduino IDE

- Developed a comprehensive burglary alarm system using Arduino Uno microcontroller.
- Implemented to enhance security measures in residential or commercial spaces.
